

Decoflame is a company which specializes in the creation, design and marketing of bioethanol fireplaces. We are an innovative company that offers decorative fireplaces which provides year round ecological warmth. The idea is to create a comfortable ambiance using high quality stainless steel decorative fireplaces. Decoflame fireplaces are a simple and affordable alternative in blending design and ecology. They offer a genuine fire, actual flames and heat without worry.

What distinguishes us from our competitors; our ability to create new unique models as well as a safe product, our ULC/UL approved certification, our reaction to the market place and our worldwide production capabilities.

#### GLASS DOOR

The tempered glass installed on the Decoflame models is patented for its design and technology. Our fireplace glass is an essential component to the security of our product, as it reduces the risk of burns.

#### FUEL TANK

Emits 9800 BTU, the 1.5 litre fuel tank is equipped with a 16 gauge, 1.5 mm thick stainless steel gusher reservoir (15 % of the initial capacity). Its unique design allows a 4.5 to 6 hour thermal consumption without elevating the BTU level authorized by the Canadian Standards.

#### ETHANOL

Our DECOFUEL bioethanol is obtained by the fermentation of sugar extracted from beets, cane sugar or the starch contained in some cereals. Our formula burns at a clean 98,5 %, without odor or residue and, most importantly, burns without elevating the authorized levels of the ULC Standards (10 000 BTU). EcoLogo approved, our bioethanol is thereby considered a product that respects the environment. EcoLogo is an environmental standard and is the most important and the most respected North American trademark.
